

Solution Brief

OneCall Support

Immediate, expert assistance to keep your operations on track

Your company has high standards for uptime, customer experience, and internal services. We help you meet or exceed those goals and transform IT operations by supporting you with attentive service and the same cumulative engineering knowledge that was used to design and implement your solutions. As a result, your team is free to focus on business outcomes and growing revenue.

We provide a single point-of-contact with all of our resources focused on resolving issues rapidly and effectively in your data centers, integrated systems, and heterogeneous environments. The result is greater reliability and availability with fewer calls, without lengthy response times or complex contract administration, and with no additional costs added to standard vendor support.

Working as an agile extension of your team, OneCall delivers:

- Cost-effective real-time support and accelerated issue resolution
- Streamlined access to support engineers with no triage
- Three 24/7 active/active/active support centers
- Multiple communication routes (phone, email, portal)
- Dedicated escalation channels
- Single-source accountability including escalation to other vendors as needed
- Defined and published service levels
- Full visibility through web-based tools for opening/tracking issues
- Flexible support services such as remote systems and network management
- Improved insight into your environment through regular performance and support call trend reviews

Our 225 certified, U.S.-based IT engineers organized in four support tiers resolve more than 1,500 incidents per month across 3,300 arrays for our clients, freeing up IT staff to focus on business opportunities. We also provide preventative support through audits and assessments, and advanced training courses to help maximize uptime and productivity.
