

Solution Brief

OneCall Support for Juniper Networks

Attentive issue resolution that draws on the skills and experience of Datalink and Insight

Utilizing the combined resources of Datalink and Insight, Datalink OneCall® Support for Juniper Networks® provides rapid and reliable assistance with any issues you encounter with your technology. Available through a convenient, single point-of-contact, our support is provided by trained engineers who take ownership of incidents affecting your data centers, integrated systems, or heterogeneous environments and work them until they are successfully resolved.

We are SSAE16/SOC 1 & 2 and Payment Card Industry (PCI)-certified, and offer a full slate of management and troubleshooting services to protect your operations. As a Juniper Elite Portfolio and Operate Partner, we map these services to Juniper's own direct services, which are fully supported by Juniper warranties.

The result is greater reliability and availability with fewer calls and without lengthy response times or complex contract administration. This means your IT group is free to focus on other mission-critical projects.

OneCall for Juniper Networks functions as an extension of your team to provide:

- Cost-effective, real-time support and accelerated issue resolution
- Support for solutions built on technology from multiple companies
- Holistic and proactive assistance
- Three 24/7 active/active/active support centers
- Multiple communication routes (phone, email, portal)
- Dedicated escalation channels
- Single-source accountability
- Defined and published service levels
- Full visibility through web-based tools for opening/tracking issues
- Flexible support services such as remote systems and network management
- Improved insight into your environment through regular performance and support call trend reviews

Organized in four support tiers, our 225 certified IT engineers resolve more than 1,500 incidents per month across 3,300 arrays and multiple technology providers for our clients. This frees IT staff to drive business outcomes. We also provide preventative support through audits and assessments, and advanced training courses to help maximize uptime and productivity.
