security services overview

Advanced data security solutions to protect your business

When it comes to securing your environment, today's complex world of security threats, compliance mandates, disparate systems, and multiple solution vendors poses challenges that can seem overwhelming. Datalink's advanced security services provide assessment, implementation, and support that maximize risk mitigation while minimizing disruption so your staff can continue to work efficiently.

Our team's focus on your security encompasses every system and service you use, and our ongoing immersion in the latest security technology and practices means you are continually receiving the best possible protection.

WHY DATALINK

- **Solution agnostic** – We don't limit your options to one manufacturer or one suite of products. Instead, we craft the ideal solution for your environment using offerings ideally suited for it.

- **Track record of success** – We have extensive experience in securing and optimizing data centers in complex enterprise settings.

- **An extension of your staff** – When you leverage our security expertise, your internal IT team is free to address other key business initiatives.

- **Comprehensive service** – We handle all aspects of securing your business: architecting solutions, selecting and implementing technology, and supporting the products, processes, and people involved.

TWO DECADES OF DATA CENTER SUCCESS

In order to properly secure your environment, a provider must fully understand it. For more than 25 years, Datalink has been a leader in all aspects of data center operations – from implementation and optimization to migration and support. Our experts not only possess in-depth knowledge of data security practices, they also understand how your data center operates and why a security solution must take productivity, efficiency, and cost effectiveness into account.

PICKING THE BEST PATH

In working with you to select the best security solutions for your needs, we also consider how you can take better advantage of your existing technology to extend the value of that investment. In many cases, we can fine-tune systems you are already using and incorporate them into your overarching strategy.

SECURITY SERVICES PORTFOLIO

PLAN	BUILD	RUN
• Security architecture Design and review • Security lifecycle assessment • Security strategy development • Penetration testing • Vulnerability assessment • Compliance review	• Security device implementation • Security information and event management (SIEM) • Log management • Security incident management • Vulnerability management • Security operations implementation and runbooks • Custom security dashboards and consoles • Integration of disparate security products • Security analyst residency	• Security device monitoring • Security device management • Vulnerability management • Managed security operations center (SOC)

Custom security dashboards and consoles	Security operations lifecycle	SIEM and log analytics	Next generation firewall and threat management	Endpoint security / authentication / vulnerability management
